

## Clean engines run better!

Vibrations when idling, misfires, high consumption, poor emissions values: faults in the engine often boil down to a simple but serious cause - **dirt!** The sensitive injection systems in modern gasoline and diesel engines are particularly susceptible to it. They need regular inspection, cleaning and maintenance by experts.

### That's your job!

LIQUI MOLY is here to support you with a professional solution: **JET CLEAN TRONIC**

### The miracle cleaner!

JET CLEAN TRONIC, the fully automatic cleaning unit, enables you to clean all mixture formation and injection systems easily and professionally. Even in the latest generation of gasoline and diesel engines.

All dirt deposits on high-pressure and distributor pumps, pipe and rail systems as well as carbon deposits and the like on nozzles, valves and combustion chambers are dissolved gently but effectively.

JET CLEAN TRONIC releases intake systems (throttle valves, EGR valves) from troublesome incrustation. Even the tank can be emptied to enable dirt or water in the fuel to be filtered out.

### It couldn't be simpler!

JET CLEAN TRONIC avoids expensive repairs, time-consuming removal/installation work and the resulting customer frustration, because all you need to do is establish a connection with the engine's fuel circuit and select the right cleaning program. The computer-controlled unit then executes a preselected cleaning cycle automatically. There isn't even any need for a power supply – JET CLEAN TRONIC is simply clamped to the vehicle's own battery.

### A professional solution!

The unit uses the powerful cleaning additives from LIQUI MOLY's professional Pro-Line range. Whether as a concentrate or a ready mixture – the ultramodern combination of active agents dissolves all deposits in the fuel system and ensures long-lasting engine cleanliness. That boosts performance and reduces fuel consumption and pollutant emissions. A clean engine simply runs better!

# AT A GLANCE - TECHNICAL INFO

For internal use only!

## **Your opportunity!**

Customers are happy to pay for a clean performance! That's why JET CLEAN TRONIC is a hugely profitable system. Showcase your expertise by offering this professional service in your workshop. Tell your customers about the costly consequences of dirt in the fuel system! Cleaning with the JET CLEAN TRONIC is child's play and requires minimal expenditure. That makes the effect all the greater – and why it's worth so much to your customers:

- **tangible better engine performance**
- **optimal emissions values**
- **much lower fuel consumption**

**Help to cut the cost of gas.  
And win yourself satisfied customers!**
